Homework 3– Implement a System Call

System Calls in an OS

Types of System Calls

- ▶ Process Control
- ▶ File Management
- ▶ Device Management
- ▶ Information Maintenance
- ▶ Communications
- ▶ Protection

Requirements

- ▶ Implement your system call and recompile the kernel
- ▶ The new system call just has to print out the following message by `printk()`: “I am Student-ID at OS 2022!”
- ▶ Write some C program to invoke the new system call
- ▶ Use `dmesg` command to check the result of using the new system call

The Sketch of Implementation

- ▶ Write system call in your Linux source code directory:
`#include <linux/kernel.h>`, `asmlinkage`, `printk()`
- ▶ Modify the Makefile so as to build the new system call into the Kernel
- ▶ Put the prototype of the new system call into `syscall.h`
- ▶ Add the mapping number of your new system call into the system call table in your system
- ▶ Compile the Kernel
- ▶ Use the function `syscall()` to invoke the new system call in a user C program

Report

1. The steps for your implementation
 2. The problem you met, and how you solved it
 3. **The reference of this homework**
- The report is limited within 4 pages in PDF

Grading

► Implementation

- Implement a system call and recompile the Kernel 30%
- Write a C program to invoke the system call 30%

► Report

- 20%

► Demo Q&A

- 20%

Submission

- ▶ Homework 1 deadline: at 20:00 on 2022-11-29
➔NO DELAY!
- ▶ Upload to e-learning system
- ▶ The title of the report: OSHomework3StudentID
- ▶ **Point deduction for wrong format: 10%**

➔DEMO will be arranged!
